A Community-Built Wi-Fi Client Database, Updated at WLPC

By **Keith Parsons, CWNE #3** · 2025-02-26 · originally on LinkedIn

Many of the best things about #WLPC are tied to the shared knowledge presented in the conference sessions. But every now and then even those presentations take on an even more important aspect of the conference. To build up the Wireless LAN community!

Case in point - François Vergès presented an update to a client database built by and for the community starting with Mike Albano's wonderful website https://lnkd.in/gBWR-NWV.

This new updated online database by François improves and adds much more detail and robustness. You really need to check out https://lnkd.in/gnGda4bc

Some great details are shared that help us all better understand Wi-Fi characteristics of our Wi-Fi Clients.

Plus the ability to upload and share YOUR client data with the community at large.

Well done François!
