WLAN Pi Go: Wi-Fi Analysis from an iPhone

By **Keith Parsons, CWNE #3** · 2025-10-17 · originally on LinkedIn

Great post Rowell, I've been using a WLAN Pi Go now for a while during some of the beta tests. Totally agree with you. This IS in a permanent place in my backpack.

Small, light, and yet very powerful indeed. My 'go to' tool has always been Adrian Granados WiFi Explorer Pro 3 on macOS... but now I get 80% of the same functionality and details on Wi-Fi from my iOS device connected with a WLAN Pi Go.

The larger WLAN Pi M4+ and R4's have their places as well... but for a quick testing this iPhone/WLAN Pi Go is a great solution!
