Seeing the Wi-Fi Link Separately From the Internet Test

By **Keith Parsons, CWNE #3** · 2025-11-08 · originally on LinkedIn

Hey Tony Fortunato, What tool/software were you using to capture that graphic above? Getting one screen that shows actual Wi-Fi from client to Access Point separate from the traffic going to the test server (in this case GetVPS.net) is invaluable when troubleshooting.

Perhaps that Wi-Fi is just reported from the Wi-Fi client NIC as current MCS rate… but even that is quite useful indeed.
