Co-Channel Contention, Not Interference

By **Keith Parsons, CWNE #3** · 2026-03-04 · originally on LinkedIn

words have meanings, and CCI implies some level of 'interference' - when in fact, 802.11/Wi-Fi is specifically engineered to have only ONE device transmit on a frequency at a time... so another device on the same channel, at the same time is NOT "interference"... but just "Contention" as designed.

I'm on Team CCC!
