LINKEDIN POST

Wi-Fi Sensing Graphics Need ESP32 Devices, Not Commodity APs

By **Keith Parsons, CWNE #3** · 2026-03-09 · originally on LinkedIn

but also misleading.

Though they offer Windows, Linux, and macOS versions - that ONLY support RSSI... the *Real* system they are using needs ESP32 devices, up to 6 of them in a mesh in order to garner the information needed for these graphics.

It does, however, make for nice eye candy.

But misleading when it says 'commodity' Wi-Fi... This is NOT something you'll get from SOHO/SMB or even Enterprise access points.
